

RF 9/19/05 290.74508M

PATENT

In the claims:

Claims 1-23. (Canceled)

5 24. (Currently amended) An information delivery system
that is connected to communication networks, comprising:

 an information receiving module in communication with a
plurality of communication networks, the information receiving
module is for receiving a message from a sender in communication
10 with a first communication network and for converting the message
into a form suited for information processing units in
communication with the information receiving module;

 detection means for detecting and distinguishing a
first keyword from requested information in a request of the
15 converted message;

RF 9/19/05 290.748UBN

PATENT

an information routing module in communication with the information receiving module, the information routing module receiving the converted message and having selection means for selecting a first information processing unit based on the first keyword and selecting a second information processing unit based on a second keyword, the second keyword being different from the first keyword and the second information processing unit being different from the first information processing unit, the information module having directing means for selecting and

5 directing the converted message to a ~~selected~~ the first information processing unit based on first key ~~data~~ word received from the sender;

10

the ~~selected~~ first information processing unit having a database with a first command list;

15 the ~~selected~~ first information processing unit having searching means for identifying the first command list associated with the first keyword;

the second information processing unit having searching means for identifying the second command list associated with the

20 second keyword;

means for downloading the first and second command lists ~~from the database;~~

RF 9/19/05 290.745USN

PATENT

first processing means for performing commands listed
in the downloaded first command list associated with the first
keyword;

second processing means for performing commands listed
5 in the downloaded second command list associated with the second
keyword;

sending means for sending a reply with results of the
performed commands;

an information sending module in communication with the
10 first and second information processing units for converting the
reply to a form suited for a receiver of the reply, the receiver
being the sender or the receiver being in communication with a
second communication network; and

a user interface in communication with the information
15 delivery server, the user interface having a terminal connected
to the information delivery system for creating and maintaining a
service product in the information delivery system, +

~~the service product adapted for fetching, processing~~
~~and storing information, the service product having an operation~~
20 ~~program presented in a database as a command list of functions to~~
~~be performed, the command list being associated with the key~~
~~word; and~~

~~the selected information processing unit being in~~
~~communication with the database for searching the key word and~~

RF 9/19/05 290.745U8X

PATENT

~~downloading the command list associated with the key word from the database and performing the functions listed in the command list.~~

5 25. (Previously amended) The information delivery system according to claim 24 wherein the information sending module is in communication with an information control module for receiving an answer therefrom for sending the reply via a sending module to the receiver of the reply.

10

 26. (Currently amended). The information delivery system according to claim 24 wherein the first information processing unit is in communication with a plurality of networks and is adapted to fetch information requested in the message,
15 from the plurality of networks or data bases stored in the information delivery server.

 27. (Currently amended) The information delivery system according to claim 24 wherein the first information
20 processing unit is adapted to handle the message and the information requested by means of a service product that has a command list program comprising a list of functions.

RF 9/19/05 290.745USN

PATENT

----- 28. (Original) The information delivery system -----
according to claim 27 wherein the command list program is stored
in a database of the information delivery server.

5 29. (Original) The information delivery system
according to claim 24 wherein the first communication network is
a wireless communication network.

RF 9/19/05 290.74508M

PATENT

30. (Currently amended) A method of delivering information to communication networks, comprising:
- providing a service product for fetching, processing or storing information;
- 5 presenting an operation program of the service product as a first command list and a second command list of functions to be performed;
- associating the first command list with a first key word and the second command list with a second key word;
- 10 storing the first command list and the second command list in a database;
- receiving a first message comprising the first key word from a first communication network;
- ~~identifying~~ detecting and distinguishing the first key word from
- 15 requested information in the first message;
- selecting an first information processing unit based on the first key word;
- selecting a second information processing unit based on the
- second key word;
- 20 searching in the ~~selected~~ first information processing unit for the first command list associated with the first key word;
- searching in the second information processing unit for the
- second command list associated with the second key word;
- finding and retrieving the first command list in the database;

RF 9/19/05 290.745UBN

PATENT

performing functions of the first command list;
fetching information requested in the first message;
preparing a first reply based on the fetched information;
the first reply to a first form suited for the first
5 communication network when the first reply is sent to the first
communication network and converting the first reply to a second
form suited for a second communication network when the first
reply is sent to the second communication network; and
the first reply to the first communication network or to the
10 second communication network.

31. (Previously amended) The method according to claim
30 wherein the method further comprises fetching information
requested in the first messages from a plurality of networks or
15 from a data base stored in the information delivery server.

32. (Previously amended) The method according to claim
31 wherein the method further comprising processing the first
messages and fetching the information requested by means of a the
20 service product, including simple functions in a command list
program, created in the information delivery system.

33. (Previously amended) The method according to claim
30 wherein the method further comprises storing an information

RF 9/19/05 290.74508N

PATENT

delivery product, comprising the information requested, in the database.

34. (Original) The method according to claim 33 wherein
5 the method further comprises modifying the information delivery product with parameters added to fields of an information delivery product program.

35. (Original) The method according to claim 33
10 wherein the method further comprises describing a function of the information delivery product with a binary program module and transferring the binary program module to an information delivery system.

15 36. (Original) The method according to claim 30 wherein method further comprises describing a function of an information delivery product with a program stored in the first communication network.

20 37. (Original) The method according to claim 30 wherein the method further comprises storing data from a set of information delivery products in an information delivery server.

RF 9/19/05 290.745USN

PATENT

38. (Original) The method according to claim 30 wherein the method further comprises storing data about a user, the data excluding identification data of the user.

5 39. (Previously amended) The method according to claim 30 wherein the method further comprises constructing an information delivery product to conform to a mediated information and to prevent access to predetermined data in the first communication network.

10

40. (Previously amended) The method according to claim 30 wherein the method further comprises delaying the first reply prior to sending the first reply.
